CABBAGE STOCKS // JANUARY 1, 1951 //

Stocks of 1950 crop Danish cabbage held by growers and dealers in or near producing areas on January 1, 1951 totaled 23,750 tons, the Bureau of Agricultural Economics reported today. These holdings are practically the same as the 23,600 tons on hand a year ago, but are only half as large as the preceding ten-year average of 47,960 tons on hand January 1. With the exception of 1946, production of Danish cabbage last fall was the largest of record. Unfavorable market conditions during the harvesting season resulted in the largest quantities of record being left in the fields unharvested. As a result the quantity harvested was less than in 1949 and below average.

CABBAGE (Danish or storage crop): Stocks held by growers and dealers in or near areas of production, January 1, 1951 with comparisons

STATE	10-YEAR AVERAGES 1//		January 1, 1950		January 1, 1951	
			(Revised)		(Preliminary)	
	Production	Jan. 1 Stocks	Production	Stocks	Production	Stocks
	1939-48	1940-49	1949	1950	1950	1951
	Tons	Tons	Tons	Tons	Tons	Tons
<u>Early Fall (Dan.)</u>						
New York	2/ 162,740	42,460	127,300	20,000	2/ 190,400	20,000
